# Political Risk Agent

Source-audited political risk workflow for turning public/live evidence into decision-useful commercial risk outputs.

This dashboard displays saved showcase artefacts only, it does not call Tavily or spend live-search credits.

Current showcase cases:

- UK ETS: regulatory policy into route-level carbon cost exposure
- Hormuz: geopolitical/security risk into transit, delay, reroute or legal-hold decision
- Critical Minerals: strategic competition into production-continuity risk
- Sanctions Trade Finance: sanctions/export controls into transaction approval, escalation, legal hold or rejection
- Cyber Business Interruption: geopolitical cyber and ransomware risk into downtime, notification, insurance and recovery decisions

The dashboard is designed as an expandable case portfolio. Future cases can be added using the same saved-showcase pattern.

## How to read this dashboard

| Step | Action                                                                                         |
|------|------------------------------------------------------------------------------------------------|
| 1    | Start with the decision recommendation.                                                        |
| 2    | Check the model output and key trigger.                                                        |
| 3    | Review source caveats and company-data requirements before treating the result as operational. |

## Cyber Business Interruption Engine: Operational Resilience and Insurance Exposure for UK Retail / Critical Services

Decision Recommendation

| Item                        | Assessment                                                                                                     |
|-----------------------------|----------------------------------------------------------------------------------------------------------------|
| Recommended stance          | Activate resilience controls: incident response readiness, notification review, insurance claim preparation, i |
| Current decision            | Do not treat cyber disruption as a technical IT issue only. The illustrative model shows expected recovery e   |
| Primary operational trigger | Expected recovery time exceeds maximum tolerable downtime.                                                     |
| Primary regulatory trigger  | Personal data breach or sector notification threshold may require ICO / regulator / customer notification re   |
| Primary insurance trigger   | Policy notice condition, waiting period or material business interruption threshold may activate the claim f   |
| Manual contingency trigger  | Core digital channel unavailable while manual process can preserve critical service or customer commitme       |
| Supplier/MSP trigger        | Third-party technology, cloud, payment, fulfilment or managed-service failure blocks recovery.                 |

Scope and Specificity

This is a client-type screen for a UK customer-facing operator with material digital trading, payment, fulfilment, customer-service or essential-service dependency. Retail is the base showcase scenario; critical-services duties may be stricter and require sector-specific legal/regulatory review.

The output focuses on business interruption, operational resilience, regulatory notification, cyber insurance and recovery decisions. It does not provide technical cybersecurity advice.

Incident Exposure Summary

| Exposure area                     | Current assessment                                                                   | Decision use                         |
|-----------------------------------|--------------------------------------------------------------------------------------|--------------------------------------|
| Threat environment                | NCSC and GOV.UK evidence supports a credible ransomware/business disruption scr      | Supports heightened incident readi   |
| Retail/customer-facing disruption | Reuters peer incident reporting shows UK retail cyber events can create customer-da  | Supports customer harm review, ma    |
