- ☐ Hormuz Route Decision Engine
- ☒ Critical Minerals Exposure Engine
- ☐ Sanctions Trade Finance Exposure Engine
- ☐ Cyber Business Interruption Engine

Political Risk Agent

Source-audited political risk workflow for turning public/live evidence into decision-useful commercial risk outputs.

This dashboard displays saved showcase artefacts only, it does not call Tavily or spend live-search credits.

Current showcase cases:

- UK ETS: regulatory policy into route-level carbon cost exposure
- Hormuz: geopolitical/security risk into transit, delay, reroute or legal-hold decision
- Critical Minerals: strategic competition into production-continuity risk
- Sanctions Trade Finance: sanctions/export controls into transaction approval, escalation, legal hold or rejection
- Cyber Business Interruption: geopolitical cyber and ransomware risk into downtime, notification, insurance and recovery decisions

The dashboard is designed as an expandable case portfolio. Future cases can be added using the same saved-showcase pattern.

How to read this dashboard

Step	Action
1	Start with the decision recommendation.
2	Check the model output and key trigger.
3	Review source caveats and company-data requirements before treating the result as operational.

Critical Minerals Exposure Engine: Rare Earth Magnet Supply Risk for UK Advanced Manufacturers

Production-continuity decision workflow for stockpile, alternative supplier qualification, redesign, customer allocation and production-hold decisions under rare earth magnet supply disruption.

Risk High	Confidence 3/5	Sources 9
Gap 135 days	Inventory 45 days	Qualification 180 days

First-Reader Summary

Item	Value
Business problem	A UK manufacturer may lose access to rare earth magnet inputs before an alternative supplier can be qualified
Decision supported	Decide whether to stockpile, qualify an alternative supplier, redesign the input, allocate scarce inventory or
Evidence-to-output logic	Export-control, concentration and industry evidence is converted into an inventory runway versus supplier c
Company data needed	Bill of materials, supplier country/ownership, inventory by input, customer commitments and qualification s

Decision Production Continuity Mitigation Options Evidence and Sources Full Brief / Source Audit

Decision Summary

Item	Value
Recommendation	Stockpile now, qualify alternative supplier, and prepare inventory allocation / production-hold contingency
Current stance	Heightened continuity controls rather than routine procurement
Main metric	Production continuity gap: 135 days
Company data required	BOM, supplier ownership/country, inventory, contracts and qualification status

Dashboard Summary

Item	Value
Decision engine	Continue / stockpile / qualify alternative supplier / redesign input / allocate inventory / production hold
Current stance	Heightened continuity controls rather than routine procurement
Primary continuity metric	Production continuity gap
Production continuity gap	135 days
Evidence mode	Live source retrieval
Source provider	tavily
Key data limits	BOM, supplier, inventory and contract data are still required for company-specific use

Decision Recommendation

Scope and Specificity

This is a client-type exposure screen, not a company-specific operational assessment. It models a UK advanced manufacturer exposed to global rare earth magnet and controlled-input disruption, with the decision framed around production continuity rather than commodity commentary.

The case is intentionally specific to rare earth magnet or magnet-dependent inputs. It should not be read as a generic statement that all critical minerals are equally risky. The relevant question is whether a controlled or concentration-exposed magnet input can be sourced, qualified, substituted or allocated quickly enough to keep production running.

Exposure Summary

Exposure factor	Current readout	Decision use
Controlled input	Rare earth magnet / mag	Confirms the case is about production-critical magnet exposure rather than generic criti
China-linked supply share	70% illustrative	Shows concentration pressure and supports whether the current supplier base is too exp
Inventory runway	45 days illustrative	Shows how long production can continue before the sourcing gap becomes operational.
Alternative supplier qualification time	180 days illustrative	Shows whether dual-sourcing can realistically protect production in time.
Exposed product-line revenue	£50m illustrative	Supports whether allocation, stockpile or hold decisions are commercially material.
Substitution difficulty	High	Supports whether redesign is plausible or whether qualification is the more realistic pat
