- ☐ Cyber Business Interruption Engine

Political Risk Agent

Source-audited political risk workflow for turning public/live evidence into decision-useful commercial risk outputs.

This dashboard displays saved showcase artefacts only, it does not call Tavily or spend live-search credits.

Current showcase cases:

- UK ETS: regulatory policy into route-level carbon cost exposure
- Hormuz: geopolitical/security risk into transit, delay, reroute or legal-hold decision
- Critical Minerals: strategic competition into production-continuity risk
- Sanctions Trade Finance: sanctions/export controls into transaction approval, escalation, legal hold or rejection
- Cyber Business Interruption: geopolitical cyber and ransomware risk into downtime, notification, insurance and recovery decisions

The dashboard is designed as an expandable case portfolio. Future cases can be added using the same saved-showcase pattern.

How to read this dashboard

Step	Action
1	Start with the decision recommendation.
2	Check the model output and key trigger.
3	Review source caveats and company-data requirements before treating the result as operational.

Hormuz Route Decision Engine: Sanctions, Insurance and Delay-Cost Trade-Offs

Trigger-based shipping-operator decision workflow for transit, delay, reroute or legal hold across sanctions, insurance, AIS/vessel-flow and detention risk conditions.

Risk Severe	Confidence 4/5	Sources 7
Break-even 0.73%	Provider Tavily	Fallback No

First-Reader Summary

Item	Value
Business problem	Strait of Hormuz disruption can turn a voyage decision into a combined sanctions, insurance, detention and
Decision supported	Decide whether to transit, delay, reroute or place the voyage on legal hold.
Evidence-to-output logic	Source evidence is mapped to legal triggers, war-risk pricing, AIS/vessel-flow signals and route-cost assump
Company data needed	Vessel value, insurance quote, charter terms, route plan, cargo details and legal/compliance clearance.

Decision Summary

Item	Value
Preferred option	Legal hold if sanctions/payment trigger is present; otherwise delay/reroute until clearance
Current stance	Transit only after sanctions, insurance and operations clearance
Legal trigger	Any safe-passage, toll or payment-equivalent demand
Reroute trigger	Direct transit becomes more expensive than reroute after war-risk premium, or detention risk remains high

Dashboard Summary

Item	Value
Decision engine	Transit / delay / reroute / legal hold
Current stance	Transit only after sanctions, insurance and operations clearance
Primary legal trigger	Any safe-passage/toll/payment-equivalent demand
Primary commercial trigger	War-risk premium or detention risk makes direct transit weaker than delay/reroute
Evidence mode	Live source retrieval
Source provider	tavily
Key data limits	Route-cost assumptions are illustrative and require operator validation

> Full decision recommendation

Decision Recommendation

Executive Judgement

Direct transit may be cheaper on voyage days alone, but it becomes commercially or legally unacceptable where sanctions-linked payment demands, war-risk pricing, AIS disruption, detention risk or unstable vessel-flow conditions are present. The current stance is not a blanket avoidance recommendation: it is a trigger-based decision framework. Legal hold applies where a sanctions/payment trigger exists; otherwise delay or reroute remains preferred until insurance, official guidance and vessel-flow signals support conditional transit.
